Claude Code Prompts

Phase-by-Phase Implementation Guide

Copy-paste each prompt into VS Code Claude chat in order

Each prompt references actual files in your repo

`github.com/Aryan-one6/tripSync_UI`

March 2026

How to Use This Document

This document contains copy-paste-ready prompts for Claude AI (via VS Code Claude chat, Claude Code CLI, or claude.ai). Each prompt is designed to be self-contained — you paste it, Claude reads your codebase, and implements the changes.

Rules

- Go in order. Phase 1 before Phase 2. Prompt 1.1 before 1.2.
- After each prompt, review Claude's output, test the app locally, fix any issues.
- Don't move to the next prompt until the current one works.
- Each prompt starts with context about what files exist and what needs to change.
- The green boxes are the prompts. Copy everything inside the green box.

Before You Start

- Make sure docker-compose up -d is running (PostgreSQL + Redis)
- Make sure npx prisma migrate dev has been run
- Make sure npm run dev works for both apps/web and apps/api
- Create a git branch: git checkout -b restructure

Phase 1: Clean Up the Mess (Week 1)

The current codebase has duplicate route groups, agency settings leaking into the traveler dashboard, and a role-switching system that confuses the UX. This phase removes all of that.

Prompt 1.1 — Delete Duplicate Routes

Your app has BOTH app/dashboard/* (non-grouped) AND app/(dashboard)/* (route-grouped) doing the same thing. Same for app/agency/* and app/(agency)/*. This creates confusion and potential routing conflicts.

```
PROMPT: Delete duplicate route folders

I have a Next.js 14 App Router project. There are duplicate route folders that need cleanup:

DUPLICATES TO DELETE (keep the route-group versions):
- Delete `apps/web/app/dashboard/` entirely (keep `apps/web/app/(dashboard)/`)
- Delete `apps/web/app/agency/` entirely (keep `apps/web/app/(agency)/`)

After deleting, check every file in the project for imports or Link hrefs
that reference the old paths and update them if needed.
The URLs should remain the same (/dashboard/*, /agency/*) since
route groups use parentheses and don't affect the URL.

Also delete this file that should not exist:
- `apps/web/app/(dashboard)/settings/agency/page.tsx`
  This is the Agency Setup page that appears inside the traveler dashboard.
  Agency onboarding should ONLY happen during agency signup, never inside
  the traveler dashboard.

After all deletions, run `npm run build` in apps/web to verify no broken imports.
```

Prompt 1.2 — Remove Role Switching from Header

The site header currently has ‘Agency Mode’ / ‘Traveler Mode’ buttons that let users switch roles. This needs to go. Travelers see traveler UI. Agencies see agency UI. No switching.

```
PROMPT: Remove role switching from header

In `apps/web/components/layout/site-header.tsx`, remove ALL role-switching logic:

1. Remove the `canSwitchToAgency` and `canSwitchToUser` variables
2. Remove the 'Agency Mode' and 'Traveler Mode' Button components (both desktop and mobile)
3. Remove the `switchRole` import from useAuth
4. Remove the `isPending` and `startTransition` related to role switching

The header should show:
- For logged-out users: 'Sign Up' and 'Login' buttons
- For logged-in travelers: 'Dashboard' button (links to /dashboard/plans)
- For logged-in agencies: 'Agency' button (links to /agency/dashboard)
- For everyone: a Logout icon button
```

```
Also update the `dashboardHref` logic to just check session.role directly
without any switchRole capability.

The `switchRole` function can stay in auth-context.tsx for now but should
not be called from any UI component.
```

Prompt 1.3 — Fix Traveler Sidebar

The traveler sidebar in app-sidebar.tsx needs to be simplified. No agency-related items should ever appear.

```
PROMPT: Fix traveler sidebar navigation

In `apps/web/components/layout/app-sidebar.tsx`:

Replace the current `userNav` array with this navigation:
- /discover -> 'Discover' (Compass icon)
- /dashboard/plans -> 'My Plans' (Route icon)
- /dashboard/plans/new -> 'Create Plan' (FilePlus2 icon)
- /dashboard/trips -> 'My Trips' (Ticket icon)
- /dashboard/messages -> 'Messages' (MessageSquareText icon)
- separator
- /dashboard/profile -> 'Profile' (User icon) [NEW PAGE - create placeholder]
- /dashboard/settings -> 'Settings' (Settings icon)

Keep the `agencyNav` array as-is but add these missing items:
- /agency/packages -> 'My Packages' (Package icon)
- /agency/storefront -> 'Storefront' (Store icon) [placeholder]
- /agency/analytics -> 'Analytics' (BarChart3 icon) [placeholder]

Add a visual separator between main nav and secondary nav
(Profile/Settings for users, Storefront/Analytics/Settings for agencies).
Use a thin border-t divider line.

Create placeholder pages for any new routes that don't exist yet:
- apps/web/app/(dashboard)/profile/page.tsx
- apps/web/app/(agency)/storefront/page.tsx
- apps/web/app/(agency)/analytics/page.tsx
- apps/web/app/(agency)/packages/page.tsx

Each placeholder should use DashboardShell with appropriate variant and
show a simple 'Coming Soon' empty state.
```

Phase 2: Make the UI Professional (Week 2)

The current UI has several problems: the clay/neumorphic shadow system looks outdated, the hero section is too wordy, the discover cards are information-heavy, and the overall feel is more ‘SaaS dashboard’ than ‘travel social app.’ This phase fixes the visual identity.

Prompt 2.1 — Modernize the Design System

```
PROMPT: Modernize the CSS design system

The current design in `apps/web/app/globals.css` uses heavy neumorphic/clay shadows
(--shadow-clay-*, multiple inset shadows) that look dated. Modernize it:

1. SIMPLIFY SHADOWS: Replace all clay shadows with clean, modern shadows:
   - --shadow-sm: 0 1px 2px rgba(0,0,0,0.05)
   - --shadow-md: 0 2px 8px rgba(0,0,0,0.08), 0 1px 2px rgba(0,0,0,0.06)
   - --shadow-lg: 0 8px 24px rgba(0,0,0,0.12), 0 2px 8px rgba(0,0,0,0.08)
   - --shadow-xl: 0 16px 48px rgba(0,0,0,0.15)
   Remove ALL --shadow-clay-* variables and replace their usage throughout
   the codebase with the clean shadow equivalents.

2. UPDATE BUTTON COMPONENT (`components/ui/button.tsx`):
   - Remove clay shadow references from all button variants
   - Primary: solid bg-[var(--color-sea-600)] text-white, hover:bg-[var(--color-sea-700)]
     shadow-sm, hover:shadow-md. Keep rounded-full.
   - Secondary: bg-white border border-[var(--color-border)] text-[var(--color-ink-900)]
     shadow-sm, hover:shadow-md. Keep rounded-full.
   - Ghost: transparent, hover:bg-[var(--color-surface-2)]. rounded-md not rounded-full.
   - Remove the active:scale-[0.97] from ALL variants (feels cheap).
   - Remove hover:-translate-y-0.5 from ALL variants (too playful).

3. UPDATE CARD COMPONENT (`components/ui/card.tsx`):
   - Card: shadow-sm, hover:shadow-md transition. Remove clay references.
   - CardFeatured: shadow-md, hover:shadow-lg. Remove clay references.
     Remove hover:-translate-y-1 (subtle hover:shadow-lg is enough).
   - CardInset: no shadow, just bg-[var(--color-surface-2)] border.

4. REMOVE ALL `clay-blob` DECORATIVE ELEMENTS:
   Search the entire codebase for 'clay-blob' and 'animate-blob'.
   Delete every decorative blob div. They add visual noise without value.
   Delete the .clay-blob and .animate-blob CSS classes from globals.css.

5. Clean up globals.css: remove any unused --shadow-clay-* variables,
   remove .clay-blob class, remove animate-blob keyframes.
   Keep the color palette (sea, sunset, sand, lavender, rose) as-is.

After changes, run the app and verify no visual breakage.
```

Prompt 2.2 — Redesign the Homepage

```
PROMPT: Redesign homepage as a social feed

Redesign `apps/web/app/(public)/page.tsx` to feel like a travel social app,
not a SaaS landing page. The current hero is too wordy and corporate.

NEW HOMEPAGE STRUCTURE:

1. COMPACT HERO (max 200px tall, not 400px):
   - No decorative blobs
   - Short heading: 'Discover your next adventure' (not a paragraph)
   - Subtitle: 'Group trips, agency packages, and travel stories' (one line)
   - Inline search bar right in the hero: destination input + 'Search' button
   - Below search: horizontal scroll of trending destination pills
     (Himachal, Goa, Ladakh, Rajasthan, Kerala, Uttarakhand)
   - 'For You' | 'Following' | 'Trending' tab switcher below the hero

2. SOCIAL FEED (single column, centered, max-w-2xl):
   - Remove the current 3-column grid of DiscoverCards
   - Single column feed like Instagram:
     Each card spans full width of the centered column
   - Mix featured plans + packages from the existing API data
   - Keep using DiscoverCard component but we'll redesign it in 2.3

3. REMOVE the separate 'Trending' and 'Agency' sections.
   Everything lives in the feed now.

4. Keep the same data fetching (getDiscoverItems, getTrendingItems, getAgencies)
   but merge them into the single feed.

Style the hero with a subtle gradient background (sea-50 to transparent),
clean typography, and generous whitespace. No borders or card wrappers
around the hero section.
```

Prompt 2.3 — Redesign Feed Cards

```
PROMPT: Redesign discover feed cards for social feel

Redesign `apps/web/components/cards/discover-card.tsx` to look like a social
media post card rather than a marketplace listing. Reference Instagram and
Airbnb card patterns.

NEW CARD DESIGN:

HEADER (above image):
- Left: creator avatar circle (initials if no image) + name + '@username'
  + verification badge (inline, small)
- Right: small arrow icon button (links to detail page)
- For agency packages: show agency logo + agency name instead of person
```

```
IMAGE AREA:
- Full-width hero image with 16:9 aspect ratio (use aspect-[16/9] tailwind)
- Rounded corners (rounded-lg)
- Bottom-left overlay: destination badge (semi-transparent dark pill)
- Bottom-right overlay: price badge ('From Rs12,500' in bold white text)
- Use the existing TripVisual component but simplify it

CONTENT AREA (below image):
- Title (font-semibold text-lg, one line, truncated)
- Date range + duration in small text
- Group progress: horizontal bar with 'X/Y joined' text,
  use a thin progress bar (h-1.5, not the current chunky one)
- Vibe tags: 2-3 small pills (text-xs, rounded-full, bg-sea-50)

FOOTER:
- Left: origin badge - 'Travel Plan' (small purple text, no pill background)
  or 'Agency Package' (small blue text)
- Right: share button (small, icon only) + WhatsApp share

OVERALL CARD STYLE:
- No outer border. Use shadow-sm for elevation.
- hover:shadow-md for hover state. No translate-y hover.
- Padding: p-0 with image flush to top, content with p-4
- Background: white (var(--color-surface-raised))
- Rounded-xl overall

Make sure the card works in the single-column feed layout (max-w-2xl centered).
```

Prompt 2.4 — Polish the Header

```
PROMPT: Polish the site header

In `apps/web/components/layout/site-header.tsx`, simplify the header design:

1. Remove the pill-shaped nav container (the rounded-full border thing).
   Just show the nav links directly in the header bar.

2. Header layout:
   - Left: Logo (existing TravellersIn logo)
   - Center: nav links as simple text links (Home, Discover, Agencies)
     Active state: text-[var(--color-sea-700)] font-semibold
     Inactive: text-[var(--color-ink-600)] hover:text-[var(--color-ink-900)]
     NO background pill, no border, no shadow on nav links

   - Right: For logged-out: 'Log In' (ghost button) + 'Sign Up' (primary button)
     For logged-in: notification bell icon + avatar circle (links to profile)
     Remove the 'Dashboard' button text - just use the avatar as the entry point.
     Clicking avatar goes to /dashboard/plans (travelers) or /agency/dashboard (agencies)

3. Simplify the header container:
```

```
   - Remove the inner rounded-xl wrapper. Use the header directly.
   - Background: white/95 with backdrop-blur-lg
   - Border-bottom: 1px solid var(--color-border) (instead of the floating card style)
   - Remove shadow-md from the header container
   - Padding: px-6 py-3
   - Sticky top-0

4. Mobile: keep the hamburger menu but simplify the overlay to a clean
   slide-down panel, not the current animated scale-in card.
```

Phase 3: Social Features (Week 3)

This phase adds the profile pages, follow system, and travel history that turn TripSync from a marketplace into a social travel app.

Prompt 3.1 — Build the Profile Page

```
PROMPT: Build a proper user profile page

There's an existing traveler profile at `apps/web/app/(public)/travelers/[username]/page.tsx`.
It's basic. Replace it with a full social profile page:

NEW PROFILE PAGE at `/profile/[username]` (move from /travelers/ to /profile/):

HEADER SECTION:
- Large avatar (96px circle, initials or image)
- Full name (text-2xl font-bold)
- @username (text-sm text-muted)
- Verification badge inline with name
- City + join date (small text)
- Bio (max 2 lines)
- Stats row: X trips | Y followers | Z following | rating stars
- Action buttons: 'Follow' (primary) + 'Message' (secondary)
  (If viewing own profile: 'Edit Profile' button instead)

TABS:
- 'Trips' tab: grid of trip cards (plans created + trips joined)
  Each card: cover image, title, destination, date, status badge
- 'Reviews' tab: reviews received from co-travelers
  Each review: reviewer avatar + name, star rating, comment, date
- 'About' tab: full bio, travel preferences (vibes they like),
  destinations visited (list), verification details

API NEEDS:
- The existing API at /users/:username already returns PublicTravelerProfile
  which has createdPlans, joinedTrips, and reviewsReceived
- Add follow/unfollow API calls (POST /users/:id/follow, DELETE /users/:id/follow)
  These don't exist in the API yet - create placeholder functions that
  return mock data for now

Also create a similar page for agencies at `/agencies/[slug]` -
the existing page at `(public)/agencies/[slug]/page.tsx` can be enhanced
with the same tab pattern (Packages, Reviews, About tabs).

Use existing types from lib/api/types.ts (PublicTravelerProfile).
```

Prompt 3.2 — Add Follow System UI

```
PROMPT: Add follow/following system

Add a follow system throughout the app:
```

```
1. FOLLOW BUTTON COMPONENT (`components/social/follow-button.tsx`):
   - Shows 'Follow' (primary small button) when not following
   - Shows 'Following' (secondary small button with checkmark) when following
   - On hover of 'Following': changes to 'Unfollow' in red
   - Loading state while API call is in progress
   - Uses auth context - if not logged in, redirect to login

2. ADD TO PROFILE PAGES:
   - On user profile: follow button in the header action area
   - On agency storefront: follow button for the agency

3. FEED TABS (on homepage):
   - 'For You' tab: shows all content (default, existing behavior)
   - 'Following' tab: shows only content from followed users/agencies
   - These tabs already exist visually on the homepage, make them functional
   - 'Following' tab calls a new API endpoint (mock it for now):
     GET /discover/following that returns DiscoverItem[]

4. API LAYER (mock for now in `lib/api/social.ts`):
   - followUser(userId): POST /users/:id/follow
   - unfollowUser(userId): DELETE /users/:id/follow
   - getFollowers(userId): GET /users/:id/followers
   - getFollowing(userId): GET /users/:id/following
   - isFollowing(userId): GET /users/:id/is-following
   For MVP, create these functions with mock responses (return empty arrays
   or true/false). The API backend will be built separately.

5. FOLLOWER/FOLLOWING COUNTS on profiles.
```

Phase 4: Chat-First Offers — The Killer Feature (Week 4–5)

This is the most important phase. Offers move from a separate inbox page into the group chat as inline cards. This is the InDrive/Rapido-style experience that makes TripSync unique.

Prompt 4.1 — Build the Offer Chat Card Component

```
PROMPT: Build inline offer card for group chat

Create a new component: `components/chat/offer-card.tsx`

This component renders INSIDE the group chat message list as a special
message type. When an agency submits an offer, it appears as a rich card
in the chat thread that everyone can see.

OFFER CARD DESIGN (full chat width, not aligned left/right like bubbles):

TOP BAR:
- Agency logo (small) + agency name + rating stars
- Status badge: 'New Offer' (green) or 'Counter' (amber) or 'Accepted' (blue)
  or 'Rejected' (red/faded) or 'Expired' (gray/faded)
- Timestamp

BODY:
- PRICE (the largest element, bold, text-2xl):
  'Rs 12,500 / person'
  If tiered: show tiers as small text below ('Rs 10,800 for 10+ people')

- INCLUSIONS (compact checklist, 2 columns):
  checkmark icons: Transport, Hotels, Meals, Activities, Guide, Insurance
  Only show what's included. Green checkmarks.

- ITINERARY PREVIEW (collapsed by default):
  'View 5-day itinerary' expandable link
  When expanded: day-by-day summary (Day 1: Manali arrival, Day 2: Solang...)

- VALIDITY: 'Offer expires in 47 hours' with a countdown or relative time

ACTION BUTTONS (only shown to the plan creator):
- 'Accept' (primary green button, full action)
- 'Counter' (secondary button, opens counter-offer bottom sheet)
- 'Decline' (ghost button, text-red)

STATES:
- PENDING: full color, buttons visible to creator
- COUNTERED: amber border, shows the counter-offer details below,
  new action buttons for the other party
- ACCEPTED: green border, green checkmark, buttons removed, shows 'Accepted by [name]'
- REJECTED: faded, strikethrough on price, 'Declined' label
- EXPIRED: faded, 'Expired' label, no buttons
```

```
Props: offer: Offer (from types.ts), isCreator: boolean, onAccept, onCounter, onReject

Use the existing Offer and Negotiation types from lib/api/types.ts.
```

Prompt 4.2 — Build the Counter-Offer Sheet

```
PROMPT: Build counter-offer bottom sheet

Create `components/chat/counter-offer-sheet.tsx`:

When a user taps 'Counter' on an offer card, a bottom sheet slides up
with a counter-offer form. InDrive-style.

COUNTER-OFFER SHEET:
- Semi-transparent overlay behind the sheet
- Sheet slides up from bottom (use CSS transform + transition)
- Header: 'Counter Offer to [Agency Name]'
- Original price shown: 'Their offer: Rs 12,500/person' (strikethrough or muted)
- YOUR COUNTER PRICE: large number input with +/- stepper buttons
  (like InDrive's price adjuster, NOT a text field)
  Default to original price. User taps + or - in Rs 500 increments.
  Show the new price in large bold text as they adjust.
- OPTIONAL: 'Request additions' checkboxes:
  [ ] Add breakfast  [ ] Upgrade rooms  [ ] Add adventure activity
- MESSAGE: optional textarea ('Any notes for the agency?')
- ROUND INDICATOR: 'Counter round 1 of 3' (max 3 rounds)
- SEND BUTTON: 'Send Counter Offer' (primary)
- CANCEL: 'Cancel' link below

When submitted:
- Sheet closes
- A new chat message appears in the thread: system message
  '[Name] countered at Rs 11,000/person'
- A new offer card appears with updated price and COUNTERED status

Use the Modal component pattern from `components/ui/modal.tsx`
but adapt it as a bottom sheet (slides from bottom, not centered).
```

Prompt 4.3 — Integrate Offers into Group Chat

```
PROMPT: Integrate offer cards into group chat message list

Modify `apps/web/components/chat/group-chat.tsx` to render offer cards
inline with regular chat messages.

CURRENT STATE:
- group-chat.tsx already handles text, system, poll, and document message types
- It uses Socket.io for real-time updates
- Messages have a `messageType` field
```

```
CHANGES NEEDED:

1. Add a new message type: 'offer'
   When messageType === 'offer', render the OfferCard component instead of
   a regular message bubble.
   The offer data is in the message's `metadata` field (which is already
   typed as Json in the schema).

2. Add a new message type: 'counter_offer'
   Same as offer but shows the counter-offer card with COUNTERED status.

3. SYSTEM MESSAGES for offer lifecycle:
   Render these as centered, muted timeline markers (not bubbles):
   - 'Himalayan Adventures submitted an offer at Rs 12,500/person'
   - 'Rahul countered at Rs 10,000/person'
   - 'Himalayan Adventures accepted the counter offer'
   - 'Offer from Peak Travels has expired'

4. The existing `offer-inbox.tsx` component should be KEPT but simplified.
   Instead of being a full page, make it a summary panel that shows a
   compact list of all offers with their current status.
   Link from the group chat header: 'View all offers (3)' button.

5. Add a 'Submit Offer' button in the chat for agencies:
   If the logged-in user is an agency and this is a user-created plan,
   show a 'Submit Offer' button in the chat input area.
   Clicking it opens a modal with the offer form (price, inclusions, itinerary).
   On submit, it creates both an offer record AND a chat message.

6. Socket.io events to add:
   - 'offer:created' -> renders new offer card in chat
   - 'offer:countered' -> updates existing card to COUNTERED
   - 'offer:accepted' -> updates card to ACCEPTED + system message
   - 'offer:rejected' -> updates card to REJECTED + system message

Keep the existing chat functionality intact (text messages, polls, system messages).
The offer cards are an ADDITION to the chat, not a replacement.
```

Before Moving to Phase 5

- At this point, test the entire flow end-to-end:
- 1. User creates a plan and gets a group chat
- 2. Other users join the plan and appear in the chat
- 3. An agency submits an offer that appears as an inline card
- 4. The creator sees Accept/Counter/Decline buttons
- 5. Creator sends a counter-offer
- 6. Agency accepts the counter
- 7. System message appears: 'Offer accepted!'
- If this loop works, you have the core product. Everything after this is polish.

Phase 5: Polish & Remaining Features (Week 6+)

Only start this phase after Phase 4 is working end-to-end. These are improvements that make the product feel complete.

Prompt 5.1 — Polls in Chat

```
PROMPT: Add interactive polls to group chat

The group chat already has a messageType 'poll' and the `metadata` field
supports poll options. Build the visual component:

Create `components/chat/poll-card.tsx`:
- Question text (bold, centered)
- Options as clickable bars (like Instagram polls)
  Each option shows: option text + vote percentage + voter count
  After voting: bars fill proportionally, your vote is highlighted
  Before voting: bars are outlined, clickable
- 'X votes' total at the bottom
- Created by [Name] + timestamp

The poll creator gets a 'Create Poll' button in the chat input area.
Clicking opens a modal: question text + 2-4 option inputs + 'Post Poll' button.

Integrate into group-chat.tsx alongside the offer cards.
Poll votes should update in real-time via the existing Socket.io
'chat:message_updated' event.
```

Prompt 5.2 — Payment Flow

```
PROMPT: Build the payment confirmation flow

When an offer is ACCEPTED in the group chat, the plan moves to CONFIRMING state.
All group members need to pay within 48 hours.

FLOW:
1. When offer is accepted, a system message appears in chat:
   'Trip confirmed! All members have 48 hours to complete payment.'
   Below this: a payment card showing:
   - Price per person
   - 48-hour countdown timer
   - 'Pay Now' button (links to the checkout page)

2. The checkout page already exists at:
   `apps/web/app/(dashboard)/groups/[id]/checkout/page.tsx`
   and the `components/payments/group-payment-card.tsx` component handles
   Razorpay integration.

3. Add a payment status indicator in the group chat:
   After each member pays, a system message appears:
   'Priya has completed payment (3 of 8 confirmed)'
```

```
   Show a progress bar in the chat.

4. When all members have paid, the plan moves to CONFIRMED:
   System message: 'All payments received! Your trip is confirmed!'
   Group chat becomes the coordination hub from here.

Use the existing PaymentRecord and GroupPaymentState types.
Use the existing Razorpay integration in group-payment-card.tsx.
```

Prompt 5.3 — Agency Dashboard Polish

```
PROMPT: Build proper agency dashboard

The agency dashboard at `apps/web/app/(agency)/` needs proper content.
The overview page exists at `components/pages/agency-overview-page.tsx`.

OVERVIEW PAGE should show:
- Welcome header with agency name + verification badge
- Quick stat cards (4 cards in a row):
  Active Packages | Open Bids | Upcoming Trips | This Month Revenue
  Use the existing StatCard component from components/cards/stat-card.tsx

- Onboarding checklist (only visible until completed):
  [ ] Upload your first package
  [ ] Add gallery photos
  [ ] Complete storefront description
  [x] GST verified
  Show progress: '1 of 4 completed'

- Recent activity feed:
  '2h ago - New user referred a Spiti trip plan to you'
  '5h ago - Your offer on Manali trip was accepted'
  'Yesterday - New review from Riya (4.5 stars)'

MY PACKAGES PAGE (`/agency/packages`):
- Grid of package cards with: title, destination, price, status badge,
  join count, departure dates
- 'Create Package' button at top
- Filter: All / Active / Draft / Completed

Use existing AgencySummary and PackageDetails types.
Use mock data if API endpoints don't return data yet.
```

Prompt 5.4 — Responsive Mobile Polish

```
PROMPT: Mobile responsiveness pass

Do a full mobile responsiveness audit of the app:
```

```
1. HOMEPAGE FEED:
   - Single column feed should be edge-to-edge on mobile (no side padding)
   - Hero search bar: stack vertically on mobile
   - Feed cards: full-width, no horizontal padding on the cards themselves

2. GROUP CHAT:
   - Full-screen on mobile (hide sidebar)
   - Input bar fixed at bottom with safe-area padding for iPhone
   - Offer cards: stack price and buttons vertically on small screens
   - Counter-offer sheet: full-screen on mobile, not a bottom sheet

3. PROFILE PAGES:
   - Avatar + name stack vertically on mobile
   - Stats row wraps to 2x2 grid on small screens
   - Tabs: scrollable horizontal on mobile

4. PLAN CREATION WIZARD:
   - Each step: full-screen on mobile
   - Progress stepper: horizontal dots on mobile, not the full stepper
   - Budget slider: edge-to-edge, large touch targets

5. NAVIGATION:
   - On mobile (below md breakpoint), add a bottom tab bar:
     Feed | Discover | Create (+) | Messages | Profile
     Elevated FAB-style center button for Create
   - Hide the top nav links on mobile (keep logo + hamburger only)
   - The bottom tab bar should use the Instagram 5-tab pattern
   Create `components/layout/bottom-nav.tsx`

Test on iPhone SE (375px) and standard mobile (390px) viewports.
```

Final Quality Check

- After all phases, verify these flows work end-to-end:
- 1. Traveler signup (3 steps) -> lands on feed -> creates a plan -> group chat opens
- 2. Agency signup (4 steps) -> lands on agency dashboard -> creates a package -> appears in feed
- 3. User sees plan in feed -> joins -> enters group chat -> agency sends offer in chat
- 4. User counters offer -> agency accepts -> payment flow -> trip confirmed
- 5. Profile pages show trip history, followers, reviews
- 6. Mobile experience feels native (bottom nav, full-screen chat, edge-to-edge feed)
- If all 6 flows work smoothly, you have a launchable product.
